

**At CGL, we understand the important role taken by the project team. We use a consensus-building approach and extensive interaction between all project stakeholders to define the objectives for a facility. Considerable time is spent in the pre-planning stage to gather input relative to the creation of an economic, functionally efficient, and effective structure that supports the client's desired operational use conditions.**

Our justice design experience illustrates that cost saving begins with objective planning. We use our focus on justice operations to translate these cost benefits into a functional and efficient design.

CGL's design team specializes in corrections, judicial, public safety, and government environments. Our understanding of facility operational philosophies, building products and systems, and methods of construction results in the development of clear, accurate, and complete plans, drawings, and specifications.

As the project continues through construction, our staff members assist contractors in the resolution of technical matters and in providing submittal approvals without delay.

CGL's variety of design experience includes local, state, federal, and international projects ranging from the development of prototype housing units for state departments of corrections, to training facilities for fire stations and law enforcement agencies, to full-service correctional facility design.

---

**CGL's design services are offered in the following general areas:**

- Bridging Documents
- Schematic Design
- Design Documents
- Project Scheduling
- Construction Budget and Cost Estimates
- Specification Documents
- Mechanical/Electrical Systems and Materials
- Security Electronic Design
- Furniture, Fixtures, and Equipment Specification
- Bid Assistance and Negotiation
- Construction Contracts and Approval Documents

The detailed work tasks provided within each service are tailored for each client, depending on the desired objectives, on a project-by-project basis.
